

JETLEADER
Digital Ink Jet press

JANPS conference in Tokyo November 2009

Features of the JETLEADER

- Offset print quality at 600dpi
- Job changeover in 1 copy without waste
- Variable image on a copy by copy basis
- Lower personnel cost (fewer and less qualified personnel, no trained printers)
- More consistent print quality than offset
- Format variability
- No page count limitation

Hybrid printing

In conjunction with an offset press, there are three variations on how the press could be used:

- 1) **Offset only**
 - a. Only the offset units would be run
- 2) **Offset and Digital**
 - a. A product using both offset and digital would be produced. Please keep in mind that the digital image can be changed on a copy by copy basis.
- 3) **Digital only**
 - a. Just the digital unit(s) would be run; the offset press would be silenced. This could be used for smaller runs to avoid the more expensive setup cost for the offset press.

General Specifications

Ink:	Uses water pigment ink
Roll width:	21.5"
Diameter of the roll:	50"
Printing speed:	492 feet per minute
Resolution:	600 x 600 dpi
